

Transportation Parking Solutions

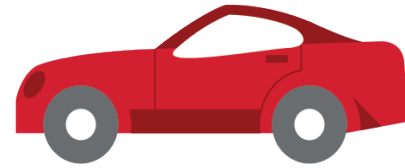

3 decades of experience

20+ million sq. ft. of coverage installed globally

95% of fabric-based covered parking structures are constructed by VPS

The Most Reliable Parking Solutions

Across three decades, Vehicle Protection Structures (VPS) has been the premier choice for the airport, transportation, and rental car industries.

As a turnkey organization, VPS is the only covered parking provider that works closely with our clients throughout the entire lifecycle of the project.

Our unique design/build process and our collaborative approach with our clients are what sets us apart. As VPS continues to lead the industry, we remain dedicated to providing innovative structures and solutions for the transportation and rental car industries.

ACCREDITED[®]
Fabricator Inspection
Agency

IAS Certification – The International Accreditation Service (IAS) is an independent, non-profit, public-benefit company that helps organizations demonstrate compliance and competence to their clients, regulators, and the general public. Our AC172 accreditation verifies that our fabrication processes and standards meet International Building Code (IBC) standards.

The world's only fabric-based covered parking provider that is a Member Contractor with ISNetworld, an independent auditor of safety, insurance, and regulatory compliance practices and a primary resource for Fortune 500 firms.

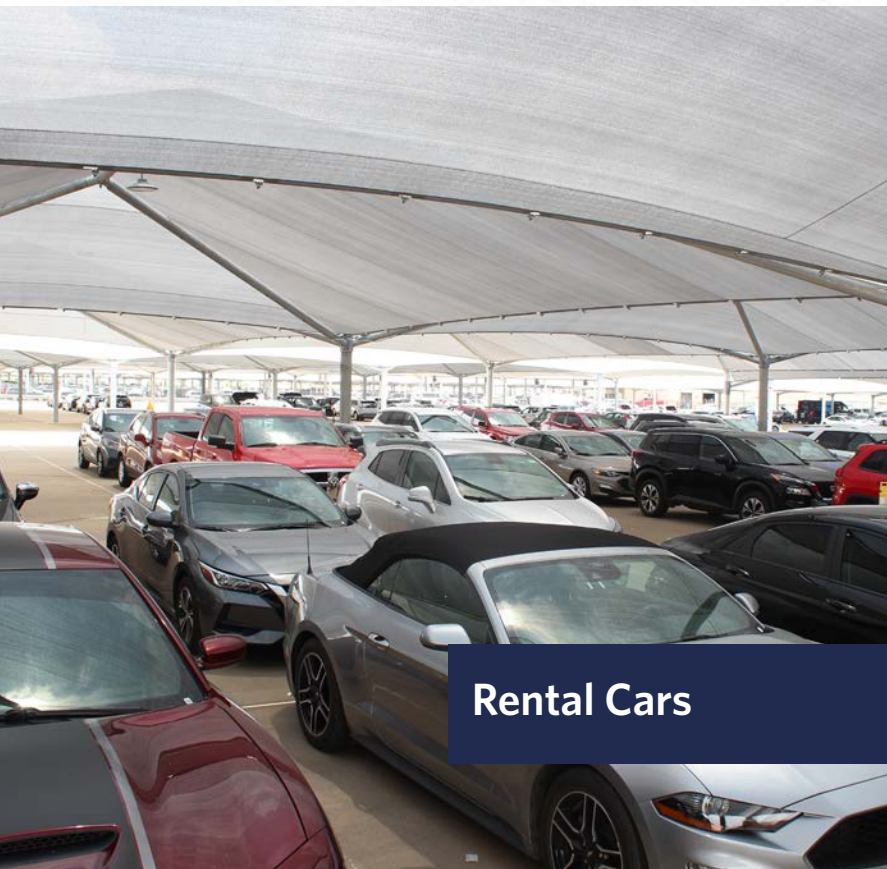

Transportation

VPS has continuously provided its clients with industry-leading and aesthetically appealing products protecting vehicles from UV/sun and inclement weather for over thirty years. For the airport and transportation sector, coverage can include:

- Airport Parking
- Transit Facilities
- Aviation
- Rental Cars
- Walkways

Walkways

Aviation

Airport

VPS products provide aesthetically appealing, revenue-generating covered parking solutions for airports across North America. Since U.S. airports are government-mandated to be as self-sustaining as possible, they operate just as normal businesses do, where revenue is generated by users of the airport. VPS products enable airports to increase revenue by charging a premium for covered parking. Further, VPS clients can also have their structures customized to meet their exact requirements, including structural preparations for lighting and surveillance, solar panels, EV charging, and more.

Transit Facilities

Protecting travelers and riders from the sun and inclement weather is a top priority for all segments of the transportation industry. Airports, bus stations, rapid transit providers and more have platforms, passenger loading zones, and ingress/egress points that can all benefit from the addition of VPS products. Our structures can be built in a variety of designs and outfitted with HDPE, PVC, or PTFE fabric membranes.

Park-n-Ride

Parking Lot Ingress/Egress Points

Walkways

Rental Car

VPS structures provide protection over cars for rental car companies during hail storms and extreme weather. One hail storm can leave these companies without thousands of cars to rent out. Customers have to experience delays from the shortage of cars. VPS provides durable hail protection for valuable vehicle inventories. Our product has been proven effective over many years in reducing hail damage to vehicles, while simultaneously providing protection from the damaging effects of excessive heat and UV exposure.

Aviation

VPS has been steadfast in serving its customers with top-of-the-line products that reduce temperatures and protect assets from weather-related events. And for three decades those benefits were primarily reserved for the automotive market; but no longer. Those same benefits are now available to aviation enthusiasts with our new Modular Hangar series. Catastrophic hail events have been increasing exponentially in recent years. Keep your most prized possessions out harm's way. Minimize your downtime and maximize your flight time with Modular Hangar structures from VPS.

Our Process

Our in-house team of experts are essential to our unique turnkey services. VPS has the extensive knowledge and capacity to handle large-scale projects and complex details. Our clients benefit from our streamlined efficiencies in our process which ensures a smoother collaborative project from start to finish.

Conceptual Design

We devise a site-specific product mix and scope definition that will bring a project to completion in an efficient and timely manner.

Project Design

We establish and develop geometry, 3D models, design drawings, and engineering calculations, providing a complete submittal package to the client.

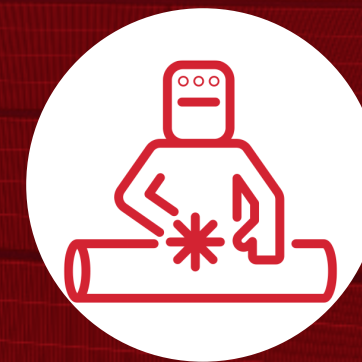

Planning & Permitting

We work closely with our clients to coordinate this process and bring about a plan the governing municipality will approve of.

Project Management

Our Project Managers and fast-track process factor in project overlaps, compress the schedule, reduce costs and maximize efficiency.

Fabrication

Our IAS-accredited facility produces cost-effective and innovative steel structures paired with durable, HDPE mesh, HDPE Scrim Membrane, PVC, and PTFE fabrics.

Construction & Installation

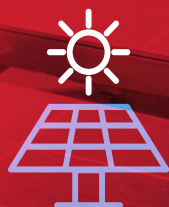

We closely coordinate this process with our clients to facilitate operational efficiency, minimizing or even eliminating business disruptions.

Solar & Renewable Energy Coverage

Our integrated fabric and solar covered parking structures are the first of their kind. Renewable energy projects offer a variety of advantages for our clients including:

Expand project funding and financing options

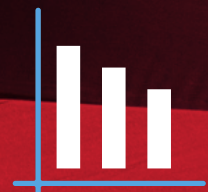

Provide responsible dual-use of covered parking areas

Generate clean energy

Support increase of electric vehicles and charging station needs

Increase your ESG score

Positively impact the communities in which you invest
